ABSTRACT

In accordance with the teachings described herein, systems and methods are provided for managing memory on a mobile device. A maximum amount of available data storage memory may be allocated for storing data for each of a plurality of software applications loaded on the mobile device. If additional memory is needed for an executing software application, then one of the plurality of software applications may be selected for memory clean-up. Data may then be deleted from the data storage memory allocated to the selected software application in accordance with a pre-established memory retention policy for the selected software application.
